Occupational Health, Safety and Environmental Policy

At Quant, we are committed to delivering our services responsibly and safely, preventing harm to our employees, contractors, customers, local communities, and the environment. Our aim is zero harm, and to become and remain the best in class in safety.

To reach this, we acknowledge these following principles:

- We believe all incidents and occupational illnesses can be prevented,
- All leaders are accountable for the safety of their people,
- Good safety behavior is the responsibility of each and every-one who works for Quant,
- Site and unit managers are responsible for the implementation of our safety management system including its lifesaving rules; this requires the allocation of appropriate resources and the provision of training, education, consultation and auditing to ensure compliance,
- Employee involvement is essential; we work relentlessly to strengthen our safety culture,
- All necessary steps are taken to learn from incidents, in order to prevent recurrence,
- Our safety experts work in networks to share and implement best practices around the world,
- We recognize outstanding performance in safety including via company-wide safety awards,
- We set applicable targets and monitor progress against these at every level of organization to ensure continuous improvement towards our zero harm and best in class goals.

Quant's OHSE activities are covered by our safety management system. Our client's corporate safety standard requirements apply only when they are of a higher standard than Quant's.

In Quant we strive to reduce negative environmental impact of our maintenance and related activities. We are committed to:

- Conducting our operations in an environmentally sound manner by applying environmental principles, such as commitment to continuous improvement, legal compliance and awareness training of our people and stakeholders, in our operations worldwide,
- Promoting environmental responsibility along the value chain (customers, Quant, suppliers, sub-contractors),
- Developing our maintenance processes always considering energy and resource efficiency and careful waste management,
- Including environmental aspects in the risk assessment of customer projects.

To protect the health of our people we are committed to maintaining an effective occupational health management program. Site and unit managers, with support of region OHSE advisors and competent occupational health professionals, assess work activities undertaken, identify occupational health implications, and include those into the program. We are committed to working towards best practices in occupational health.
