

ENVIRONMENTAL POLICY

At Quant, we are committed to managing our business, and delivering our services in a sustainable way, responsibly and safely, preventing harm to our employees, customers, contractors, local communities, and the environment.

We recognize that our operations result in emissions to air, consumption of energy, use of chemicals and generation of waste. We fulfil the legal obligations that apply to our services, as well as work relentlessly to meet with all customer and stakeholder requirements related to environmental aspects of our business.

To reach this, we apply these following environmental principles:

- » Environmental aspects are included in the risk assessment of our customer projects, evaluation of business partners, as well as in the development and continuous improvement of our processes.
- » We provide environmental awareness training for our people and relevant stakeholders on topics such as responsible energy use, resource efficiency, safe use of chemicals and careful waste management.
- » Site and unit managers are responsible for the implementation of our integrated management system including its environmental policy; this requires the allocation of appropriate resources and the provision of training, education, consultation and/or auditing to ensure compliance.
- » Employee involvement is encouraged via application of local instructions, work methods and through reporting of environmental observations, hazards and incidents in our OHSE system.
- » We promote environmental responsibility, awareness and actions along the value chain (customers, Quant, suppliers, sub-contractors). We inform our key stakeholders about our environmental policy and make it available through our website.
- » We set applicable targets and monitor progress against these at every level of organization to ensure continuous improvement.

Quant's environmental activities are covered by our integrated management system. When operating at our client's facilities we follow their corporate environmental standard requirements when they are of a higher standard than in Quant, and support the achievement of our Client's environmental targets.
